# 7 WAYS IS-TALK MAKES IT EASIER TO SWITCH

Our Hosted PBX phone system offers many benefits for small businesses, eliminating the need for on-site phone equipment. It reduces costs dramatically while providing Fortune 500 features.

1

## Easy Purchasing Experience

IS-TALK's experienced business consultants can develop a complete quote for any business in just a few minutes. They work with you to select the right phone hardware and help you transfer your current numbers. You can keep your existing broadband Internet connection and IS-TALK does the rest.

2

## No Phone System Required

Because phone system functionality is hosted on IS-TALK's VoIP Server there is no PBX, IP PBX, Key or other costly phone system to buy or maintain. That is significant savings in time and money and it means that you'll never outgrow your system. You will connect to IS-TALK services over your current Internet Connection.

3

## Remote Worker Integration

If your business extends beyond the confines of a traditional office, IS-TALK offers a turn key solution for keeping employees connected. Individual remote workers can join your unified business phone system simply by plugging pre-configured phones into their broadband connection at home or at a remote office. Travelers can even use most hotel connections.

4

## Rapid Deployment

Training of your employees is included to make sure you get the most out of IS-TALK service. Installation is as easy as plugging in the pre-configured IP phones to your existing network connection.

5

## Easy To Learn Features

In addition to all the basic features you expect like call waiting, call transfer, and conference calling, IS-TALK offers call recording (either on demand or dedicated seats.)

6

## Long Distance Included

Keeping your telephone cost the same each month helps manage your business. IS-TALK includes unlimited\* local & domestic 48 states long distance calling.

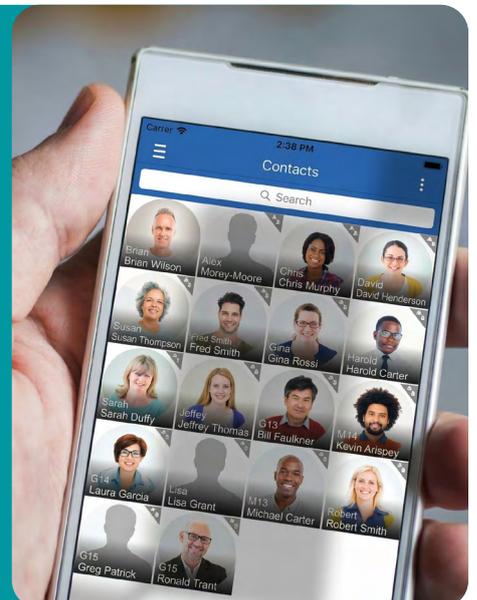

*\*Unlimited is defined as normal business practice use. Does not include call centers/campaigns or toll free usage.*

7

## Disaster Recovery Protection

Our servers are fully redundant with power and internet connectivity, therefore your phone calls will continue to function no matter what happens at your office. Callers never get a fast busy signal, voice-mail remains operational and lines can be forwarded to alternative phones in minutes.

**Choosing IS-TALK Hosted PBX solution is one of the easiest ways to protect your business from sudden disruptions, such as power outages and natural disasters.**
